Lead developer .NET C#

Development of an ERP system for a furniture factory based on WPF

January 2009 —
July 2021
12 years 7 months

Freelance

C# software engineer

- development of web systems based on Ruden.CMS (ASP.NET web forms + jQuery),
- development of web systems based on FalconSpace (ASP.NET mvc + knockout),
- web systems development (ASP.NET core web api + Angular),
- systems design (Axure RP),
- work with stakeholders (functions of a business analyst and a system analyst). For example, the search for optimal technical solutions, the proposal and presentation of solutions for employees by the customer,
- working with the development team. In a variety of aspects: advising colleagues on all issues, tracking results, analyzing task performance, code review, training. As well as planning, defining control points within SCRUM, searching for opportunities to speed up the development process, searching for "narrow" specialists to solve special problems,

- interaction with partners, and with external services. First of all, we are talking about setting up interaction between technical systems through the API, this is either the coordination of the interaction protocol, or the development of the protocol from scratch. As well as training of key employees of external organizations involved in the business processes of the customer,
- technical expertise. That is, conducting research on incidents discovered during testing or operation. This is usually related to speed, but there may be other reasons, such as security, or functional limitations,
- development of separate modules and forms, mostly backend in C#, to a lesser extent frontend in Angular, earlier on Knockout, earlier on jQuery
- selection and training of specialists,
- code review,
- speed optimization,
- search for orders: exchanges, tenders, advertising,
- preparation of commercial proposals and contracts,
- I would combine the rest of the functions into the "different" group, these are one-time, or rarely repeated tasks, of which there are quite a lot, for example, to perform some kind of data manipulation. Or, for example, I had to make graphic elements (Photoshop)
